Katherine Braught Teaching Evaluations and Feedback

The following pages contain student evaluations of my teaching at the University of Illinois Urbana-Champaign.

- **ENG 580 — Classroom Observation, Fall 2026:** An observation of my guest teaching in a lecture with over 300 students highlighted clear explanations, encouraging responses to students, and active learning through peer discussion and practice. Suggestions for improvement included making visual examples more accessible and clarifying activity expectations and time limits.
- **CS 173 ONL — Discrete Structures, Summer 2026:** I served as the instructor for the course. The evaluation received 8 responses from 72 students (11.11% response rate). My overall teaching effectiveness was rated **4.50/5.00**.
- **CS 374 ADB/ECE 374 ADB — Introduction to Algorithms & Models of Computation, Fall 2025:** I served as a teaching assistant and led a discussion section. The evaluation received 18 responses from 79 students (22.78% response rate). My overall teaching effectiveness was rated **4.56/5.00**.
- **CS 374 AYF/ECE 374 AYF — Introduction to Algorithms & Models of Computation, Spring 2026:** I served as a teaching assistant and led a discussion section. The evaluation received 8 responses from 40 students (20.00% response rate). My overall teaching effectiveness was rated **4.50/5.00**.

Student Ratings of Teaching and Learning

Evaluation item	Fall 2025	Spring 2026	Summer 2026
Overall teaching effectiveness	**4.56/5**	**4.50/5**	**4.50/5**
Gained expected knowledge/skills	3.74/4	3.75/4	3.88/4
Instructor support for learning goals	3.59/4	3.75/4	3.50/4
Welcoming classroom environment	3.78/4	3.75/4	3.88/4

Student Comments

Students consistently highlighted clear explanations, opportunities to practice and apply concepts, and a welcoming environment that encouraged them to ask questions:

> "Katherine was a great TA! I think her clear explanations were the most helpful to my learning." — CS 374, Spring 2026

> "I loved Katherine's teaching style, she was very patient and always sought to clarify any confusions I had. She also made sure I understood what we were doing before moving on." — CS 374, Fall 2025

> "I like the written problem part where we get to grasp the concept through applications and implementations in problem solving." — CS 173, Summer 2026

ILLINOIS

CENTER FOR INNOVATION IN TEACHING & LEARNING

249 Armory Building, MC-528
505 E. Armory Ave.
Champaign, IL 61820-6241

Participant: Katherine Braught
Observer: Dr. Yonghee Lee (Teaching and Learning Specialist)
Course and Location: ENG 580, 3039 Campus Instructional Facility
Date: October 2, 2026
Approximate number of students: Over 300 students

Major strengths demonstrated by the participant:

- The instructor frequently repeats, summarizes, or rephrases students' answers so that the whole class can hear them. The instructor also responds with encouraging comments, such as "Good" and "That's good," and asks follow-up questions and adds feedback.
- The instructor gives students opportunities to discuss ideas and practice what they learn. For example, during Worksheet Part 1, students work in small groups to practice explaining solutions using the DHT framework. Many students talk with their neighbors during the activity. In another activity, almost all students participate in drawing a cat. During the cat drawing activity, many students smile and laugh loudly while working on their drawings and talking about them with peers.
- The instructor maintains eye contact with students rather than reading directly from the slides. The instructor also walks back and forth across the front of the classroom while explaining concepts and asking questions.
- The instructor uses examples, hints, and follow-up questions to help students work through problems. The instructor explains concepts in plain language and provides additional guidance when students need help.

Suggestions for improvement:

- Some figures, particularly those in Example 3, are difficult to see at the back of the large classroom. Using bigger figures or showing important parts separately could make it easier for students to follow the explanation, especially those sitting farther from the screen.
- Some students speak quietly when answering questions, making their responses difficult to hear. The instructor already does a good job of repeating and summarizing students' answers. Continuing to do this whenever students speak quietly would help the rest of the class follow the discussion.
- When using abbreviations such as "DHT," saying the full term first could help students who are not familiar with the term understand the explanation. The instructor also introduces terms such as "scaffolding" and "heuristics." Because students come from different engineering backgrounds, some may be new to these terms. Briefly explaining them in plain words when they are first introduced could help all students follow the lesson more easily.
- The instructor gives students time to complete worksheet activities and discuss questions with peers. Stating how much time students have and what they should complete before starting each activity and before the activity ends could help students know what to focus on.

FLEX Open-Ended Items

What aspects of the course design and/or delivery most benefitted your learning?

Comments
Having class records which helps me a lot during examlet revision
I like the written problem part where we get to grasp the concept through applications and implementations in problem solving,
The examples from old past exams were extremely helpful for the necessary repeated practice of skills learned in this class.
The textbook was very well written, the use of discord as a forum for questions+office hours. Instructor, CAs, and TAs were all very good at explaining concepts & generally welcoming & helpful (although I'm not sure I'd count that as part of the course design)

What change to the course design or delivery would most benefit your learning?

Comments
Able to ask questions immediately in class.
There is too much reading especially for a class that has discussion session almost everyday, it is not very friendly to students who have problem reading words, I hope there can be interactive textbooks or pre recorded videos instead.
A more formatted pre–lecture besides just reading the textbnook may help. Sometimes concepts in the textbook (whether or not explained in lecture) were a bit heavy or confusing so it could help to have that condensed or talked through.
The only thing I can really think of is having more variations on practice problems available but that's not to say there was a terrible shortage of them.

What recommendations would you give to future students of this course?

Comments
Do more practise exercise before the exam because there is limit time you can do calculation on scratch paper
Excellent instructor and content, but you should really count on yourself to pay enough effort to understand the concepts.
Ensure to brush up on old algebraic concepts so that you can easily apply the math to the fundamental skills of this course.
Do the written problems, even the non–required ones. Also, there are extra practice problems under exam resources that are quite helpful.

Comments
Homework and labs
I found the labs extremely helpful in building my broader knowledge in the course. I felt extremely well supported by Katherine and the other TAs and they often helped me understand the concepts and apply the concepts.
I think lab was really helpful so that we could work on problems and ask questions, it was definitely less intimidating than asking questions in lecture.
I liked the labs
Many opportunities to practice the course content in the labs, also the instructor allowed the students to ask many questions and answered them to the best of her ability.
The practice questions in lab sections, practice questions on homework, and practice questions before exams were helpful. Nothing else provided in that class was useful, and I had to search for resources outside the class material to be able to manage the assignments. The provided teaching material was too basic, neither sufficient nor adequate, and it was not helpful for the homework assignments or exams.
Katherine Braught was great with course delivery and explaining the content.
I loved Katherine's teaching style, she was very patient and always sought to clarify any confusions I had. She also made sure I understood what we were doing before moving on. Very welcoming and kind, and she encouraged me to ask more questions when I needed.
I liked how the discussion section was a good mix between presenting an expected solution to a problem category, and then allowed us to work in groups to figure out similar problems and the TA/CAs were very helpful in walking around, making sure everyone's questions were answered.
The labs and homework provide students with quality practice of course concepts.

What change to the course design or delivery would most benefit your learning?

Comments
I sometimes wished the labs were longer so that we could spend time completing the entire lab.
I thought the way it was set up was good.
I think that the instructor could have spent more time slowly and deliberately explaining the solutions to problems.
Provide adequate materials so that every student can complete assignments on their own in a timely manner. Please do not suggest that people should do homework in groups, as this usually results in one person doing the work. And if someone wants to learn on their own, the time required to complete all assignments is enormous and often not manageable. Also, taking points away for handwritten homework is extremely annoying, as typesetting the assignments takes many, many hours that are wasted away, and could be used for study or practice instead. Telling us that group members should split the typing is useless advice, as nobody wants to be anybody's secretary. Additionally, the students who actually do well in that class do their homework on their own, not relying on the group.
Release solutions with lab problem sets.
Have more TA's like Katherine
I can't necessarily think of any changes to the course design. I think Katherine was a really amazing TA! She was very patient and helpful, sometimes I have trouble asking some questions to some TAs / professors due to hesitancy that the answer is something I should already know. But I found that I was able to ask questions to Katherine without any of this hesitancy, as she would always answer them slowly and patiently, making me feel more confident in the class. I am very grateful that she was my TA.
n/a

What recommendations would you give to future students of this course?

Comments
Pay attention and do the homework seriously (don't take shortcuts)
Attend labs! Ask questions! Work with other students! It will help understand the course.
Do most of the lab questions even if you didn't finish them in class.
Try to attend as many discussions as possible since they are a good opportunity for practice.
Be prepared to suffer sleepless nights, and no guarantee of a decent grade, or take the class lightly, and be prepared for your GPA to tank. Also, if you complain about the GPA, be ready to be told by instructors a lie, that your GPA does not matter, and that you should enjoy the class for the learning alone.
Lock in
Take your discussion section with Katherine!
Don't be discouraged, start early on everything and if you take the time to understand the material, you can do it!

Course Engagement

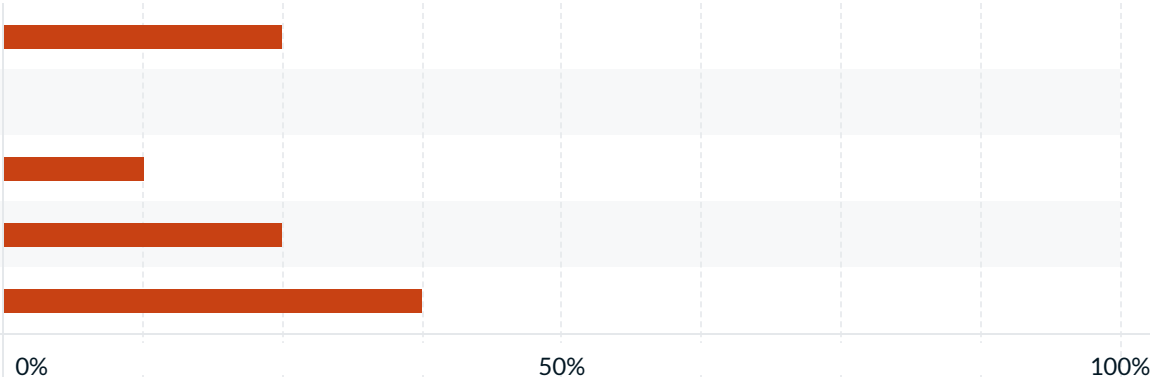

Adding together both time spent in class and time spent out of class, what was the average number of hours per week you spent on this course?

1 <5	1	12.50%
2 6-10	0	0.00%
3 11-15	4	50.00%
4 16-20	3	37.50%
5 21+	0	0.00%
Total	**8**	

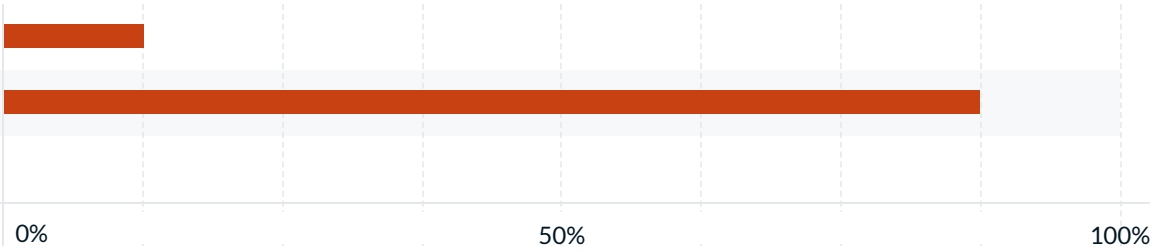

What percentage of classes or class recordings did you attend or view?

<20%	2	25.00%
20-40%	0	0.00%
41-60%	1	12.50%
61-80%	2	25.00%
80%+	3	37.50%
Total	**8**	

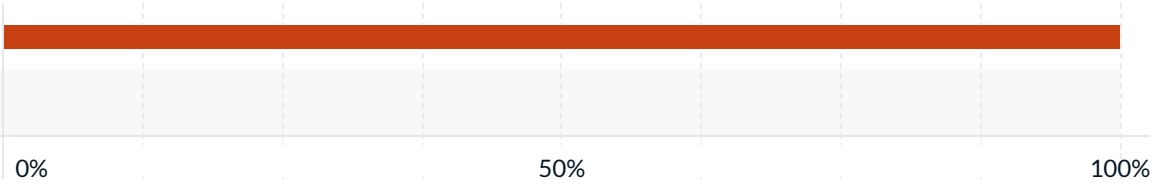

Did you take this course to fulfill a general education requirement?

Yes	1	12.50%
No	7	87.50%
Unsure	0	0.00%
Total	**8**	

Are you a degree-seeking student?

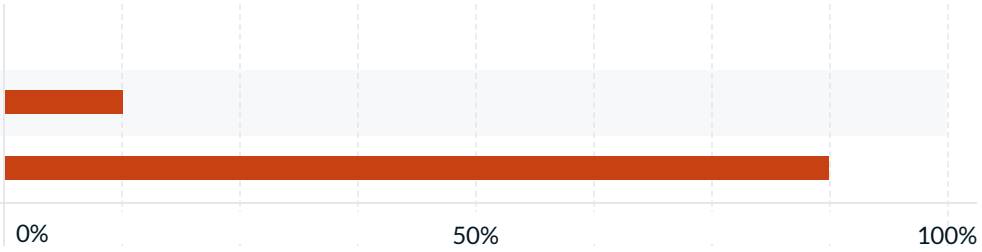

Yes	8	100.00%
No	0	0.00%
Total	**8**	

Shown to Degree-seeking Students

What requirement did this course fulfill for your degree?

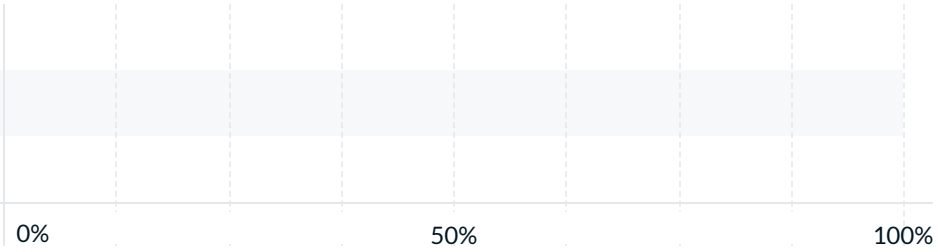

Elective	0	0.00%
Required but a choice in major, intended major, or minor	1	12.50%
Specifically required by major, intended major, or minor	7	87.50%
Total	**8**	

Shown to Non-degree-seeking Students

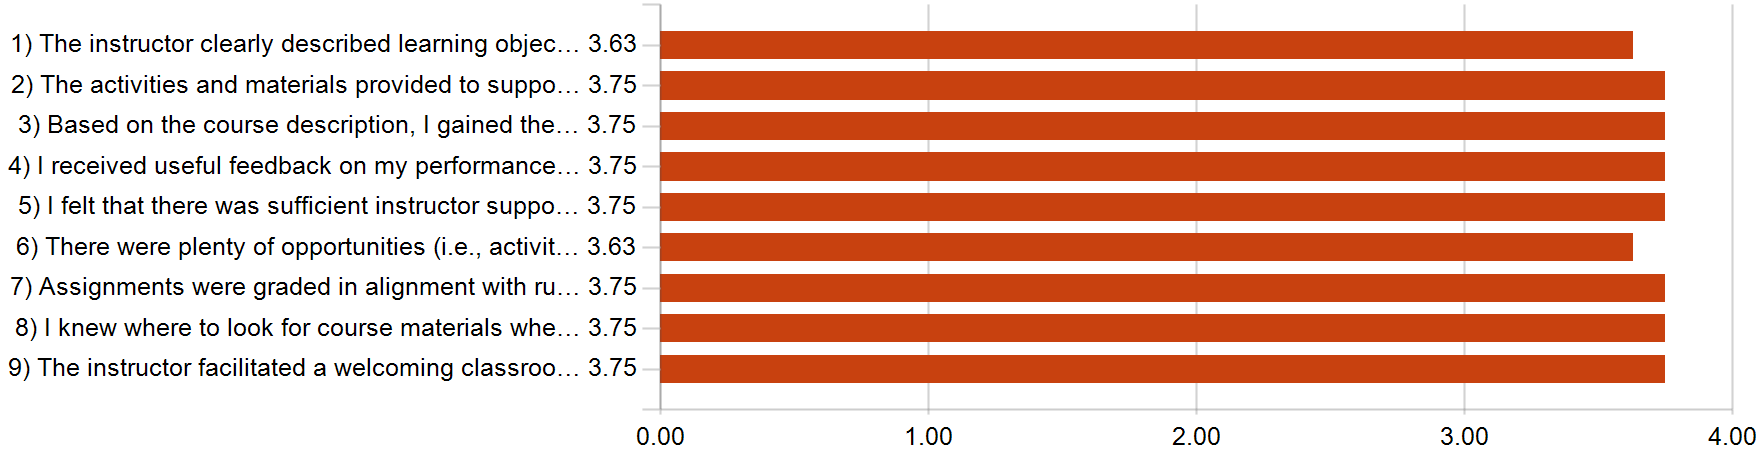

Which option best describes why you're taking this course?

Elective	0	0.00%
To fulfill a requirement but a choice amongst several courses	0	0.00%
To fulfill a specific requirement	0	0.00%
Total	**0**	

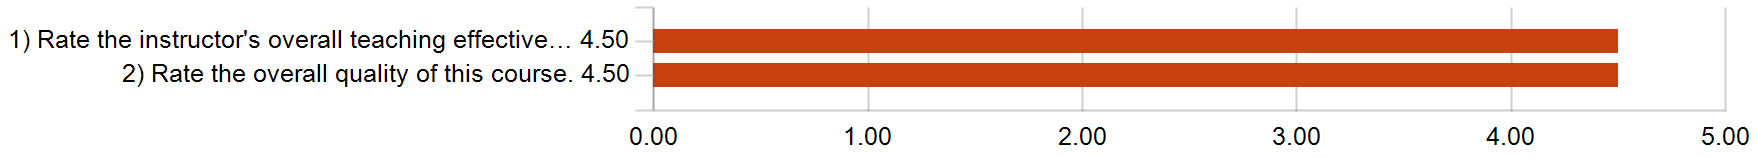

Rating Scale Item Means

Rating Scale Item Means (4 selections)

Question	Mean
The instructor clearly described learning objectives for the course.	3.63
The activities and materials provided to support my learning were closely aligned with the graded assignments/assessments of learning.	3.75
Based on the course description, I gained the knowledge/skills that I expected to gain from participating in this course.	3.75
I received useful feedback on my performance in this course.	3.75
I felt that there was sufficient instructor support to achieve the course learning goals.	3.75
There were plenty of opportunities (i.e., activities, assignments, projects) to practice and apply the knowledge/skills learned in this course.	3.63

I knew where to look for course materials when I needed them.	3.75
The instructor facilitated a welcoming classroom environment.	3.75

Rating Scale Item Means (5 selections)

Question	Mean
Rate the instructor's overall teaching effectiveness.	4.50
Rate the overall quality of this course.	4.50

FLEX Open-Ended Items

What aspects of the course design and/or delivery most benefitted your learning?

Comments
Katherine was a great TA! I think her clear explanations were the most helpful to my learning. The active and slightly less structured discussion environment was very engaging, and helped create opportunities for me to have questions answered and deeply understand concepts. I don't think I could have succeeded in this class without the quality teaching that Katherine offered..
The office hours and opportunities to practice concepts.

What change to the course design or delivery would most benefit your learning?

Comments
Changing how labs work (go over 1 problem together, then do the rest of the problems)

What recommendations would you give to future students of this course?

Comments
They should take Katherine's section!
Get a good group and practice a lot.
